FLARED CANOPIES

Service

Carefree production and custom order canopies are constructed using a tapered outside edge on the sides of the canopy.

This provides:

- Better appearance when the awning is retracted;
- Reduced wrinkling; and,
- Improved fabric tension.

Dimensions are approximate and may vary based on installation and fabric tolerances.

CA006b

When ordering custom replacement canopies:

- Provide the awning's center of arm to center of arm measurement; or,
- Measure the length of the existing canopy fabric at the awning rail polyrod.

NOTE: Custom one-piece canopies are flared. Custom two-piece canopies may or may not be flared based on the material (refer to "series 80" below).

Stocking Canopies (select canopy styles are not flared)

	Flared	Square Cut
Series 30 1 piece construction (with all polyrods are sewn in)		
with vinyl weatherguard	YES	
with premium vinyl	YES
