

Service

Starting in January 2013, Carefree is introducing the Flared Vinyl Canopy for vertical arm patio awnings. The new canopy construction uses a tapered outside edge on the sides of the canopy.

This improvement provides:

- Better appearance when the awning is retracted;
- Reduced wrinkling; and,
- Improved fabric tension.
- The new canopy construction installs the same as current awning canopies.

Dimensions are approximate.

CA006

When ordering replacement canopies, provide the awning's center of arm to center of arm measurement.

If the awning center of arm to center of arm measurement is not available, measure the length of the existing canopy fabric at the awning rail polyrod.

Please note: Flared canopies are one-piece construction. Two-piece replacement canopies are not flared.
