

REPLACEMENT SPRING ASSEMBLIES

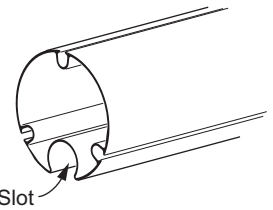

**Dealer Service**

For manual patio awnings, Carefree uses two types of roller tube. A standard 3-slot roller tube or a roller tube with a utility slot.

Because of the assembly process, the spring assembly for the standard 3-slot roller tube spring assembly did not fit the utility slot roller tube. The utility slot roller tube required a unique spring assembly.

A new assembly process has been developed that allows the same spring assembly to be used with either style of roller tube.

This development consolidates the replacement spring assemblies, reducing the number of part numbers for replacements. Below is a chart of the new numbers.
